

ACTIVE RISK MANAGER

Active Risk Manager (ARM) Overview

ARM is a leading web-based, enterprise risk management system. It was designed to be a scalable, risk management solution that provides the right information to the right people at the right time in a secure fashion.

ARM fully integrates, in real-time, with leading project management planning and requirements management applications, and allows risks to be identified, assessed, managed and reported against any point on a WBS or RBS.

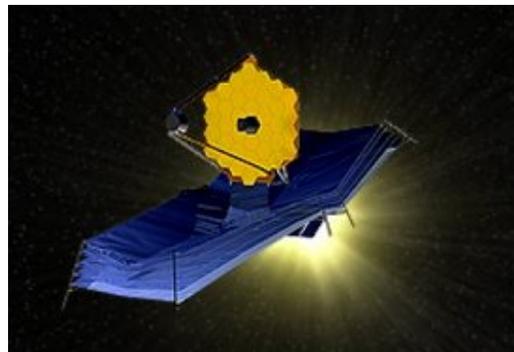

ARM allows organizations to increase risk transparency and communication by being accessible around the world – through shared data environments (SDE) or securely through a web browser on the Internet or an intranet.

The leadership, scalability, security and accessibility of ARM are all factors that make ARM the world's leading enterprise risk management system.

Key Clients

- BAE SYSTEMS
- General Dynamics
- Honeywell
- Lockheed Martin
- NASA
- Northrop Grumman
- Rolls Royce
- Thales
- UK Ministry of Defence

Key Features:

- risk management and reporting modules together in one, seamless application
- multiple levels of system security and user role configurations
- integration with leading project and requirements management tools
- qualitative and quantitative analysis
- threat and opportunity analysis
- management reserve and provision tracking
- intelligent email alert system
- mitigation tracking and EVM exports to Artemis
- customizable to fit with each projects/programs processes, methodologies, reporting and analysis requirements
