LOGISTICS MODERNIZATION PROGRAM (LMP) INCREMENT 2 WAVE 2

ERP INTEGRATION

OVERVIEW

Enterprise Resource Planning (ERP) program integration is already happening as part of the LMP Increment 1, but Increment 2 Wave 2 ERP integration delivered upgrades to functionality in order to fully integrate with and create additional interfaces to the Army Enterprise Systems Integration Program (AESIP).

Bottom line, ERP Integration as part of the LMP Increment 2 Wave 2 provides required interchange of data with the other Army ERPs in support of the Army's Net Centric Data strategy.

ERP Integration Details

Wave 2 ERP Integration supports full end-to-end (E2E) integration of logistics and financial processes from the foxhole to the factory with increased efficiency and effectiveness. Specifically, the Enterprise Data Warehouse (EDW) enhancement created capabilities and processes that enable the LMP to become a data provider to AESIP.

Overall Increment 2 Wave 2 Capabilities

ERP Integration

- Total Package Fielding
- Enterprise Data Warehouse

Non-Army Managed Items (NAMI)

Army Prepositioned Stock (APS)

Who Uses ERP Integration?

No new sites received this enhanced ERP Integration functionality.

Users who already use this functionality are seeing upgrades in the system and notice differences in things like how to run reports, and how they look at and work with other ERP's data.

The Strongest Army in the World is Strengthened by the LMP
