

# LogiQuest®

Defense Logistics System

## LogiQuest is a comprehensive Web Based Parts & Logistics Research Tool

*LogiQuest* is a powerful, easy to use logistics information search and retrieval product from Terabase. *LogiQuest* offers unparalleled cross-referencing across all of its databases. One simple search can instantly provide information on possible suppliers and their past performance, alternate or replacement parts, drawings and technical documents, open solicitations and much, much more.

Customers have the option of searching in real-time or they can process large batch jobs offline. To help find the information quickly, *LogiQuest* provides a comprehensive set of search keys for each database. We go far beyond the common NIIN, NSN, Part Number, CAGE and Keyword indexes that our competitors typically have.

Attractive, comprehensive built-in reports can be personalized to ensure that the information fits the user's needs. Our extensive cross-referencing facilities allow us to integrate data, such as Procurement History, CAGE/CCR and PID data, with major databases such as the FLIS into user-defined reports or downloads.

*LogiQuest* includes powerful, time-saving tools such as: true background batch processing and downloading of data in the native formats of popular programs. These formats include Excel, Access and SQL Server as well as DBase3 to support xBase products. Printed reports are available in PDF format. Customers can create custom download and report layouts including the selection of individual fields and their formats. Additionally, many of *LogiQuest's* interactive displays may be tailored to remove unnecessary information minimizing the time required to display the necessary information.

### POWERFUL

- Custom Report Generator
- Custom Download Designer
- Powerful Batching Facilities
- System & Personal Search Groups
- Extensive File Indexing
- Multiple Search Interfaces

### BENEFITS

- Time-Saving: Comprehensive Search of Multiple Sources in Seconds
- Ease of Use: Search dozens of Databases from One, Easy to Use Interface
- Accessible: Access *LogiQuest* from anywhere via an Internet Connection

### FEATURES

- Data on over 7.1 million active NIINs
- Over 3.2 million historical NIINs and NICNs
- Over 60 databases aggregated from dozens of Government and Commercial Sources
- Customizable E-mail alert service for Government Open Bids
- Instantly identify preferred Government vendors (Veteran or small business)
- Seamless integration with other popular part oriented products, Caps Expert and Inventory Locator Service (ILS)
- Product or Service Information

## LogiQuest was designed with the user in mind, offering unmatched Flexibility & Functionality

LogiQuest has three different search interfaces to choose from. "Quick Search" simplifies searching by allowing customers to combine text and fielded values in a single input. This easy to use interface is designed to rapidly find answers by letting users enter values without worrying where they occur in the data. Clients always have the option to tag a value if they want to find records where the term occurs only in a certain field. Both methods can be combined to find data quickly and accurately.

The more advanced "Classic Plus" and "Forms Query" search interfaces are available to meet the needs of the power user. When you know exactly what fields you want to search, either interface can be used to build a visual query by specifying the indexed fields to be searched, the values to be found, and how to combine (and/or) each term. Advanced features include using index values from one database to search another (ie. using Procurement keys in a FLIS search), and the support for "Greater Than", "Greater Than or Equal To", "Less Than", "Less Than or Equal To" and "Not Equal To" comparisons.

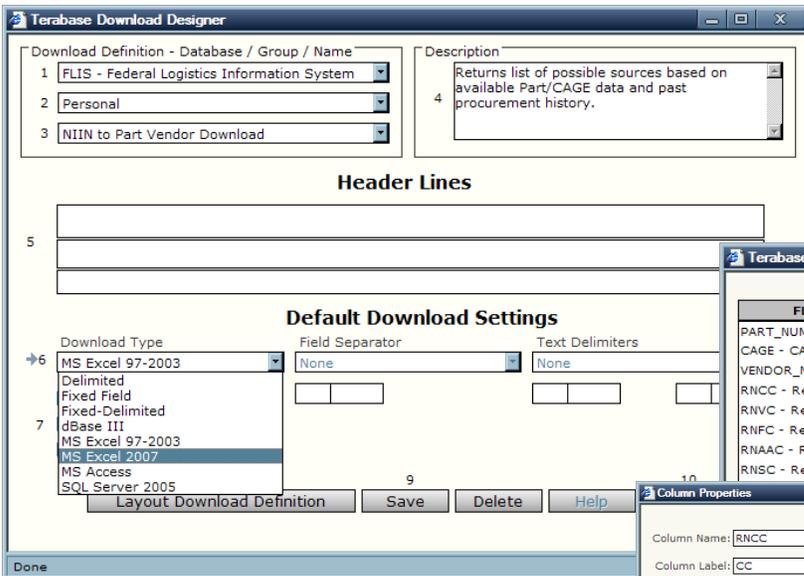

Classic plus adds Technical Characteristic searching and "Ranges" of values. All three interfaces support wildcard searching.

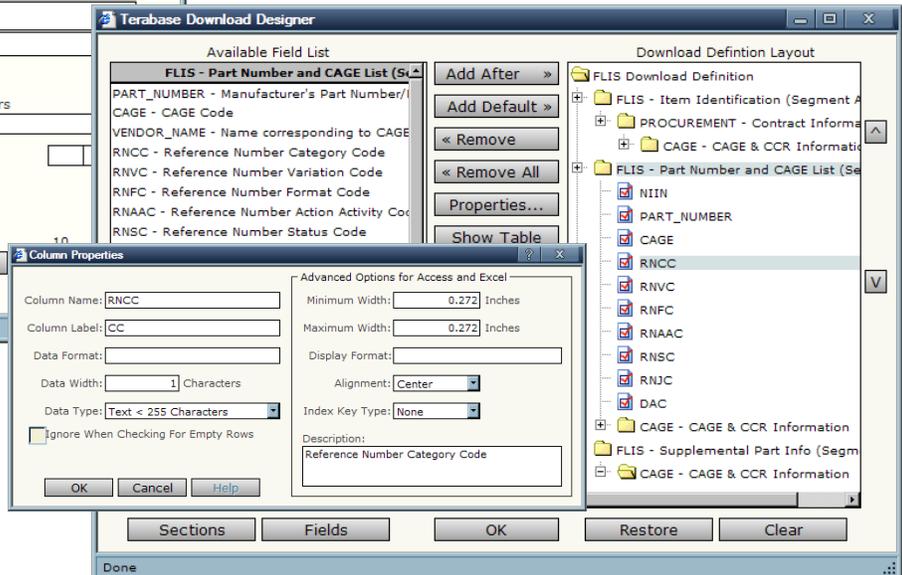

Classic plus adds Technical Characteristic searching and "Ranges" of values. All three interfaces support wildcard searching.

## Bridging the gap between commercial sources and military supply chains

## LogiQuest includes powerful custom Report & Download Designers

The report and download designers in LogiQuest offer section-by-section and field-by-field selections from any database. Data from multiple databases can be included in a single concise report or download by cross-referencing on fields such as NIIN and CAGE codes. Definitions are stored on our servers so users can access their custom designs from anywhere.

Everything from the label to the column width and alignment can be specified. Clients decide what data to retrieve, in what order and in what format.
